Profile

Senior Software Engineer with 4+ years building production mobile and backend systems across proptech, edtech, AR/VR, and HR domains. I design Flutter architectures (Melos monorepo, Clean Architecture, BLoC), ship backend services in Node.js/NestJS, and own the full release pipeline — CI/CD, Shorebird OTA, and store automation across 80+ white-label apps. Lately I have moved deeper into AI engineering: integrating on-device inference (Gemma), multi-provider LLM APIs (Anthropic Claude, OpenAI GPT, Google Gemini), AI-powered search, and LLM-based developer tooling into production systems. I fix root causes, ship tests alongside features, and have an open-source AI utility published on PyPI — high output without leaving a mess behind.

Experience

RentOk (EazyApp Tech Pvt. Ltd.)

Senior Software Engineer — AI & mobile platform; proptech managing 15,000+ properties & 230K+ tenants across India
Gurugram, India

Apr 2026 – Present

- Leading the **RentOk Mobile AI Ecosystem**: architected the AI layer across the mobile app integrating on-device inference (Gemma), and cloud LLM APIs (Anthropic Claude, OpenAI GPT, Google Gemini) — with a unified fallback strategy so the app degrades gracefully when offline or under load.
- Built an in-app **AI assistant with on-device Gemma inference** and cloud LLM fallback, handling tenant queries directly inside the app without routing every request through the cloud.
- Integrated **AI-powered room and property search**: LLM-backed recommendations that surface relevant listings based on tenant intent rather than keyword matching alone.
- Built the Node.js availability engine behind an **AI booking bot** — a single-CTE query bridging the legacy and new room schemas, verified against a live 48-room property.
- Led the app stability campaign: **crash-free rate went from ~85% to ~97%** (Crashlytics) within my first quarter. Root causes included UI-thread blocking in global search, out-of-memory crashes in image-heavy lists on iOS, and a Firebase Keychain failure that silently logged users out. An estimated 66K crash events and 3.3K ANRs per cycle eliminated.
- Built the release infrastructure: Shorebird OTA for Android and iOS with a two-branch release/patch model, on-demand builds with TestFlight and Slack integration, and per-platform version resolution pulled from the App Store Connect and Play Console APIs. **Critical fixes now reach users same-day** instead of waiting on multi-day store review.
- Shipped **Multi-Property View** end-to-end across 9 listing surfaces (rooms, dues, complaints, bookings, payments, search, deep links), rebuilt search and filtering to stay responsive on 3,000+ item lists, and delivered a Slack-style @mention system for complaint threads.
- Built two internal tools solo: a Flask dashboard that automates App Store releases across the **80+ white-label app fleet** (batch release, live iOS/Android version tracking), and a Next.js CI/CD dashboard with **LLM-based build-failure diagnosis (LangChain)**.
- Hardened the shared tenant SDK behind the white-label fleet: fixed a silent JWT hang, a cold-start freeze that had no timeout or recovery path, and type-coercion crashes; wrote up the remaining known issues rather than leaving them tribal knowledge.
- Backend features ship with their tests: revenue-forecast reporting (21 tests), a TDD-first birthday report written red-to-green, and 213 tests added to the previously untested entry-exit module, with known bugs documented for the team.

Quicktouch Technologies Limited

Senior Flutter Engineer

May 2023 – Mar 2026

New Delhi, India

- Designed the base architecture for **7 Flutter apps**: a Melos monorepo with shared packages, feature modules, and `get_it` DI, so parallel teams could ship without stepping on each other.
- Built a payment SDK handling UPI, card, and wallet flows across all apps, with PCI-DSS-compliant encryption, retry logic, and analytics instrumentation so the product team could see exactly where payments failed.
- Created a JSON-driven theming system for client reskins without rebuilds, with LaunchDarkly for remote feature toggles after release.
- Rebuilt CI/CD on GitHub Actions and Codemagic with parallel builds, test gates, and direct store deploys — **release cycles went from days to hours**, and Shorebird OTA cut critical-fix delivery from about a week to same-day.
- Wrote native Kotlin and Swift modules for BLE device communication and encrypted local storage.
- Introduced TDD/BDD across projects (`bdd_widget_test`, unit and widget coverage); **crash rates fell ~60% over six months**. Mentored 4 junior engineers through reviews and pairing.

InnotekVerse Pvt. Ltd.

Software Engineer (Flutter & Full-Stack)

Mar 2022 – Apr 2023

Noida, Uttar Pradesh

- Led Flutter development for **Vorphy**, an AR/VR classroom platform used in 30+ schools; built a two-way Flutter–Unity bridge over platform channels and event streams for real-time UI–scene communication.
- Profiled Unity rendering bottlenecks and cold starts, improving startup time ~40% on the budget Android devices schools actually use.

- Built the NestJS backend (assessments, analytics, role-based access) and set up the team's first CI/CD pipeline for mobile and backend.

SaiTec International Computer Consultants
Software Engineer Intern

Aug 2021 – Mar 2022
Noida, Uttar Pradesh

- Built Flutter apps and React.js dashboards for government clients under strict compliance requirements.
- Integrated third-party APIs with token auth, error handling, and offline caching for unreliable networks.

Selected Projects & Open Source

- **claude-conversation-viewer** — *Open Source · Python · Published on PyPI*
Zero-dependency tool for browsing, searching, resuming, and exporting Claude Code sessions. Ships a web GUI and a terminal CLI, runs on macOS/Linux/Windows, with usage stats and Markdown/JSON export.
- **Quick Campus** — *Flutter, BLoC, Clean Architecture, Node.js, CI/CD*
School ERP used by **4,000+ schools**: two Flutter apps (students, staff) plus a web admin panel. Designed the full architecture, chose the state-management approach, and set up the CI/CD the team shipped on.
- **Vein HRMS** — *Flutter, ML Kit, Shorebird OTA, Geofencing*
HR platform with facial-recognition attendance (ML Kit), GPS geofencing, payroll, and workforce reports. Shorebird OTA meant production issues could be patched the day they were found.
- **Consolidate Fleet Tracker** — *Flutter, MQTT, Firebase Realtime DB, IoT*
Real-time tracking for a 100+ vehicle fleet: live GPS over MQTT, route history, and fuel analytics, designed to keep latency low on spotty mobile networks.

Technical Skills

Languages	Dart, TypeScript/JavaScript, Python, Kotlin, Swift, SQL
Mobile	Flutter, Android/iOS SDK, platform channels (Kotlin/Swift), BLE, Shorebird OTA, deep links (App/Universal Links)
Architecture & State	Clean Architecture, Melos monorepo, SOLID, BLoC, Riverpod, Provider, GetX
Backend	Node.js, NestJS, REST, WebSockets, MQTT, JWT/OAuth2, Zod, Flask
Web	Next.js (App Router), React, TanStack Query, Tailwind, Vercel
AI Engineering	On-device inference (Gemma), LLM API integration (Anthropic Claude, OpenAI GPT, Google Gemini), LangChain, prompt engineering, AI-augmented development, Claude Code (open-source tooling on PyPI)
CI/CD & DevOps	GitHub Actions, Codemagic, Fastlane, App Store Connect API, Play Developer API, Azure, Launch-Darkly
Testing & QA	TDD/BDD, unit/widget/integration tests, Jest, bdd_widget_test, Firebase Test Lab, Flutter DevTools
Firebase	Auth, Firestore, Realtime DB, FCM, Crashlytics, Analytics, Remote Config, App Distribution
Databases	PostgreSQL, MySQL, MongoDB, SQLite (drift/sqflite)

Education

Galgotias University
B.Tech, Computer Science & Technology

2018 – 2022
